

# CSGOAI – Whitepaper

**Category:** GameFi – AI / Analytics

**Network:** Solana

**Date:** August 2025

## 1. Abstract

CSGOAI is a next-generation GameFi project combining AI-driven gameplay analytics, real-time performance guidance, reward mechanisms, and a multi-chain Web3 infrastructure. Built on Solana, CSGOAI enhances player performance through professional-level insights while enabling a token-based community economy.

As funding grows, CSGOAI is expanding into a fully AI-oriented “AI Companion” layer — an intelligent assistant designed to guide players inside and outside the game, provide tailored data, and create a personalized competitive ecosystem.

## 2. Introduction

Modern gaming increasingly demands professional-level skills, yet most players lack the analytical tools and guidance required to improve.

CSGOAI was created to fill this gap.

Our platform provides:

- AI-powered match analysis
- Real-time strategic decision support
- Player development pathways
- Token-powered utilities
- Community-driven value creation

This ecosystem empowers both casual and competitive players to evolve their gameplay with the support of advanced AI technology.

## 3. Problem & Solution

Problems in Today’s Gaming Ecosystem

- Lack of accessible performance analytics
- Centralized control of in-game economies
- Limited guidance for improving gameplay
- Insufficient earning opportunities for players

CSGOAI Solutions

- AI-based personalized analysis
- A tokenized community economy
- Player rewards integrated into gameplay
- Expansion toward an AI Companion-driven metaverse

## 4. AI Integration & AI Companion

CSGOAI's AI Companion is the core of the new generation ecosystem.  
It provides:

- **Real-time performance feedback**
- **Strategic decision support during gameplay**
- **Personalized improvement maps**
- **Match-based emotional and behavioral insights**
- **Voice-assisted coaching (future phase)**
- **Integration with upcoming esports features**

The AI Companion positions CSGOAI as the bridge between Web2 gaming and the Web3 competitive landscape.

## 5. Tokenomics

CSGOAI uses a **fully community-driven distribution model**.

There is **no separate team allocation**; the team is integrated into the community pool to maximize transparency, trust, and long-term alignment.

**Total Supply:** 1,500,000,000 CSGOAI

**Token Standard:** SPL

**Model:** Deflationary + utility-focused

Allocation	Percentage	Amount	Description
Community & Public Supply	90%	1,350,000,000	Liquidity, MM operations, development, partnerships, team share (community integrated), staking, rewards, CEX/DEX preparations
Airdrop Rewards	6.67%	100,000,000	Growth campaigns, user onboarding, ecosystem missions
Burn Reserve	3.33%	50,000,000	Strategic burns conducted before listings to optimize market conditions

## 6. Burn Strategy (Listing-Oriented Burn Model)

CSGOAI uses an **event-driven burn model**, not a fixed schedule.

- Burns are executed **before major DEX and CEX listings**
- Burn amounts depend on liquidity strategy and supply management needs
- Aim: Better price discovery, stronger economics, healthier listing performance

This model supports long-term stability and aligns with the multi-listing roadmap.

## 7. Investment & Funding

From the day of mint, CSGOAI has been in an ongoing investment round that is **fully integrated into the community/public pool**.

There is **no private or preferential allocation** — investors participate under the same principles as the community.

### Capital Raised

CSGOAI has raised **\$600,000**, primarily from **Dubai-based strategic investors**, reflecting the project's strong global appeal.

### Honorable Strategic Investor

Our most distinguished investor is **Monisman Holding**, a respected multinational group whose involvement significantly strengthens the project's credibility and international expansion efforts.

### Non-Profit Investor Philosophy

All investors have expressed that they are **not pursuing short-term profit** and instead support the long-term ecosystem vision.

### No-Sell Commitment

Every investor — including Dubai strategic partners and Monisman Holding — has formally committed to **not selling any tokens before 2027**.

This provides:

- Zero early sell-pressure
- Higher listing confidence
- Long-term stability
- Stronger community trust

## 8. Use Cases

The CSGOAI token serves as the backbone of the entire ecosystem:

- Access to the AI Companion
- In-game marketplace utilities
- Tournament rewards
- Player-to-player transfers
- Staking, premium analysis, and future subscription tiers
- Multi-chain utility expansion (BSC & ETH)

## **9. Multi-Chain & Multi-Listing Strategy**

CSGOAI is building a strong multi-chain presence to maximize accessibility and market depth.

DEX Listings

- Raydium (Live)
- Jupiter / Orca (Expansion)
- PancakeSwap – BNB Chain
- Uniswap – Ethereum

CEX Targets

Phase 1 (Early 2026):

- MEXC
- LBank
- Gate.io
- Bitmart

Phase 2:

- KuCoin
- Bybit

Each listing phase includes:

- Strategic burns
- Controlled liquidity deployment
- Market maker execution
- AI Companion marketing campaigns

## **10. Community & Governance**

CSGOAI is committed to adopting decentralized governance over time.

Token holders will influence:

- Feature development
- Reward models
- AI Companion upgrades
- Treasury usage

DAO governance will expand as the ecosystem grows.
